FOR IMMEDIATE RELEASE

## Corossol Software debuts Centerboard 2.0

COLLIERVILLE, TN, (December 22, 2008) Corossol Software is pleased to announce the unveiling of Centerboard 2.0, the latest version of the software that is offering all types of businesses freedom and efficiency. Centerboard 2.0 will be released January 26, 2009.

Centerboard 2.0 includes three important enhancements from Centerboard 1.9 including:

- Document Image Indexing – Centerboard 2.0 allows users to scan in documents and manually input required data eliminating the need for expensive third-party software.
- Searching – Centerboard 2.0 displays drawers, folders and files in a new tree view, all within the main Centerboard browser rather than a separate window. Searches, results, details and documents can all be viewed from a single Web page.
- Folder aliases – Folders may be given alternate names to make them easier to locate.

Centerboard receives input from a variety of sources such as fax, e-mail, or an internal application, and uses that data to set the corresponding steps or tasks into motion. By ensuring processes are completed properly and consistently, Centerboard helps businesses cut costs and discover missed or lost business. Centerboard also creates efficiency within businesses by sending automated notifications to customers, suppliers or internal staff and cutting the amount of time employees spend on repetitive tasks.

Additional features include:

- **Content management** – Regardless of file type, files and data are organized so the user can search and view the content quickly and easily.
- **Automated processes** – Centerboard automates customized processes for any business or department.
- **Automated notifications** – Users receive notifications via e-mail, fax, or other sources when a prior step has been completed either informing them of progress, or that action is required on their part. Additionally, images and files can automatically be forwarded where needed as soon as they are received.
- **User-friendly** – Centerboard is simple and easy to use; users can set it up without assistance. Processes can be defined and modified without the need for computer programming.

*Corossol Software is headquartered in Collierville, Tennessee, and has offices in Centennial, Colorado.
